

ABSTRACT OF THE DISCLOSURE

A medical imaging marker includes a marking body having a shape. The marking body can comprise a mixture of materials having different imaging properties. The particular properties of the different constituent materials of the mixture can be independently controlled.

- 5 The relative amounts of the materials in the mixture can be varied. The mixture can be a conventional mixture, a suspension, a composite, a glass, or other mixture. The marker can be usable in a plurality of imaging techniques.
